Rosemount™ 3051S Series of Instrumentation

Scalable pressure, flow, and level solutions

Innovation reaching across your operation

With the Rosemount 3051S Series of Instrumentation, operations can be optimized in these critical areas: production, quality, energy efficiency, and safety and environment. By leveraging the power of the scalable Rosemount 3051S across the entire operation, you'll be able to minimize process variability, gain greater process insight, reduce maintenance and downtime, and meet regulatory demands. What's more, it's easy to use, ensuring the full potential of the measurement investment is realized.

EMERSON
Process Management

Rosemount 3051S SuperModule™ Platform

The most advanced pressure, flow, and level measurements

- The all-welded hermetic SST design delivers the industry's highest field reliability
- Ultra performance provides up to ±0.025% accuracy and 200:1 rangedown
- Ultra for Flow performance provides up to ±0.04% of reading and 14:1 flow turndown
- 15-year stability and 15-year limited warranty
- SIL3 Capable: IEC 61508 certified by an accredited 3rd party agency for use in safety instrumented systems up to SIL 3 (minimum requirement of single use [1oo1] for SIL 2 and redundant use [1oo2] for SIL 3)

Rosemount 3051S Series selection guide

Rosemount 3051S Coplanar™ differential, gage, or absolute transmitter

See ordering information on page 5.

- Coplanar platform enables integrated manifold, primary element, and seal system solutions
- Dual-capacitance Saturn™ sensor technology corrects for overpressure and line pressure effects
- Calibrated spans from 0.1 inH_2O to 4000 psi (0,25 mbar to 276 bar)
- Available with 316L SST, Alloy C-276, Alloy 400, Tantalum, gold-plated Alloy 400, or gold-plated 316L SST process isolators

Rosemount 3051S In-line gage or absolute transmitter

See ordering information on page 14.

- Direct threaded connection, manifold or seal system solutions
- Piezoresistive sensor technology allows calibrated spans from 0.3 to 10000 psi (20,7 mbar to 689 bar)
- Available with 316L SST or Alloy C-276 process isolators

Contents

Rosemount 3051S MultiVariable™ Transmitter

See ordering information on page 21.

- Combines differential pressure, static pressure, and process temperature measurements along with mass and energy flow in a single device
- Compensates for 25+ different variables providing accurate and repeatable flow readings
- Customize pressure and temperature compensation for any flow application
- Easily configure flow and device parameters with Engineering Assistant Software

Rosemount 3051SF DP Flowmeters

See ordering information on page 30.

- Integrates the Rosemount 3051S with Rosemount's industry leading primary elements to create one complete flowmeter assembly
- Fully assembled, configured and leak tested for out-of-the-box installation
- Reduce installed costs by replacing ten parts traditionally used for a DP Flow installation with one flowmeter
- Reduce straight pipe requirements, lower permanent pressure loss, and achieve accurate measurement in small line sizes

Rosemount 3051S Electronic Remote Sensor (ERS™) System

See ordering information on page 57.

- The industry's first digital DP Level architecture consists of a single 4-20 mA HART® loop with two Rosemount 3051S pressure sensors connected electronically
- Unique digital architecture enables stable and repeatable DP Level measurements on tall vessels, towers, and applications with wide-varying temperatures
- Achieve increased process insight and diagnostics with multivariable measurements including DP, pressure, and scaled variable for tank level or volume
- Simplify installations and maintenance by eliminating wet or dry legs, heat tracing, and purge systems

Rosemount 3051S Level Transmitter

See ordering information on page 72.

- Level transmitters combine world-class Rosemount 3051S Pressure Transmitters with direct mount seals, all in a single integrated model number
- Connect to virtually any process with a comprehensive offering of seal types, sizes, fill fluids, and diaphragm materials
- Combine with an Rosemount 1199 Remote Mount Seal to form a Tuned-System™ Assembly for a cost effective, easy-to-install DP Level measurement solution

Advanced functionality

*Wireless*HART® (IEC 62591) capabilities

Available on coplanar, in-line, multivariable, DP flowmeters and level transmitters

- Quickly deploy new pressure, level and flow measurements in 70 percent less time
- Eliminate wiring design and construction complexities to lower costs by 40–60 percent
- Reduce pipe penetrations and impulse piping with industry-leading multivariable technology
- Extended range antenna capabilities provide access to remote locations
- Delivering over a decade of maintenance free performance with 15-year stability and 10-year power module life

Advanced diagnostic capabilities

Available on coplanar, in-line, DP flowmeters and level transmitters

- Provides diagnostic coverage from the process to the transmitter to the host
- Prevent on-scale failures by diagnosing electrical loop issues with Power Advisory diagnostics
- Statistical Process Monitoring detects abnormal process conditions enabling more productive and safer operations
- Extend diagnostic coverage to Safety Instrumented Systems with IEC 61508 SIL 2/3 capable rating

Remote display and interface

Available on coplanar, in-line, DP flowmeters, electronic remote sensors, and level transmitters

- Direct mount to the process and access transmitter capabilities and diagnostics at grade
- Get access up to 100 ft (30 m) away from the process to ensure personnel safety
- Eliminate the need for impulse lines for best practice installations

Rosemount Instrument Manifolds

Available on traditional, coplanar, and in-line transmitters

- Designed and engineered to provide optimal performance with Rosemount 3051S Transmitters
- Reduce cost and leak points with flangeless coplanar design
- Fully integrated manifold and transmitter assemblies come fully leak checked, calibrated and assembled allowing for one purchase order to save time and cost
- Rosemount manifolds provide a wide variety of styles, materials, and configurations to fit any process

Rosemount 3051S Coplanar Pressure Transmitter

Rosemount 3051S Coplanar Pressure Transmitter

Rosemount 3051S Coplanar Pressure Transmitters are the industry leader for differential, gage, and absolute pressure measurement. The coplanar platform allows seamless integration with manifolds, primary elements, and seal solutions. Capabilities include:

- Ultra, Ultra for Flow, and Classic Performance
- 4-20 mA HART, Wireless, FOUNDATION™ Fieldbus protocols
- Safety Certification (Option code QT)
- Advanced Diagnostics (Option code DA2)
- Remote Display and Interface (Option code M7, M8, or M9)

1. For detailed specifications see "Specifications" on page 100.
2. This option is only available with range codes 2A and 3A, 316L SST or Alloy C-276 isolating diaphragm and silicone fill fluid.

3. Performance Class code 3 is available with Measurement Type code D only.
4. 3051S_CD0 is only available with SST traditional flange, 316L SST diaphragm material, and Bolting option L4.
5. Materials of Construction comply with metallurgical requirements highlighted within NACE MR0175/ISO 15156 for sour oil field production environments. Environmental limits apply to certain materials. Consult latest standard for details. Selected materials also conform to NACE MR0103 for sour refining environments. Order with Q15 or Q25 to receive a NACE certificate.
6. Tantalum diaphragm material is only available for ranges 2A - 5A, differential and gage.
7. "Assemble to" items are specified separately and require a completed model number. Process connection option codes B12, C11, D11, EA2, EA3, and EA5 are only available on differential Measurement Type, code D.
8. Consult an Emerson™ Process Management representative for performance specifications.
9. Not available with Performance Class code 3.
10. Requires PlantWeb housing.
11. Only intrinsically safe approval codes apply.
12. Only available with output code X.
13. Available with output code A only. Available approvals are FM Intrinsically Safe; Nonincendive (option code I5), CSA Intrinsically Safe (option code I6), ATEX Intrinsic Safety (option code I1), or IECEx Intrinsic Safety (option code I7). Contact an Emerson Process Management representative for additional information.
14. Long-Life Power Module must be shipped separately, order Power Module 701PBKKF.
15. Option HR7 configures the HART output to HART Revision 7. This option requires the selection of the Advanced Diagnostics (DA2) option. The device with this option can be field configured to HART Revision 5 or 7 if desired.
16. Requires PlantWeb housing and output code A. Includes Hardware Adjustments as standard.
17. Requires Rosemount Engineering Assistant to configure.
18. For process connection option code A11, the mounting bracket must be ordered as part of the manifold model number.
19. Not available with output code F.
20. Not available with output code X.
21. Not available with housing style codes 00, 2E, 2F, 2G, 2M, 5A, 5J, or 7J.
22. Not available with process connection option code A11.
23. Requires PlantWeb housing and Hardware Adjustments option code D1. Limited availability depending on transmitter type and range. Contact an Emerson Process Management representative for additional information.
24. This assembly is included with options EP, KP, E1, N1, K1, ND, E4, E7, N7, K7, E2, E3, KA, KC, KD, IA, IB, IE, IF, IG, KG, T1, K2, N3, EM, and KM.
25. Transmitter is shipped with 316 SST conduit plug (uninstalled) in place of standard carbon steel conduit plug.
26. Valid when SuperModule Platform and housing have equivalent approvals.
27. Not available with M20 or G $^1/_2$ conduit entry size.
28. Only available on differential and gage measurement types. Silicone fill fluid is standard.
29. Bolts are not considered process wetted. In instances where NACE MR0175/ISO 15156 and NACE MR0103 conformance is required for bolting, L7 is the recommended bolting option.
30. Not available with Housing code 7J.
31. Not available with output code F, option code DA2, or option code QT.
32. See the Rosemount 3051S Reference Manual for cable requirements. Contact an Emerson Process Management representative for additional information.
33. P1 is not available with 3051S_CA0.
34. When assembled to remote diaphragm seal system using B11 or B12process connections, the maximum working pressure of the system may be limited by the rating of the Rosemount 1199 Seal System selected.
35. Requires 316L SST, Alloy C-276, or Gold-plated 316L SST diaphragm material, assemble to Rosemount 305 integral manifold or DIN-compliant traditional flange process connection, and bolting option L8. Limited to Pressure Range (Differential), ranges 2A – 5A.
36. Not available with output code F or X. Not available with housing code 7J.
37. Not available with Housing code 00, 5A, 5J, or 7J.
38. The T1 option is not needed with FISCO Product Certifications; transient protection is included in the FISCO product certification codes IA, IB, IE, IF, IG, and KG.
39. Requires 316L SST diaphragm material, glass-filled PTFE O-ring (standard), and Process Connection code E12 or F12.
40. Not available with Housing code 00, 5A, 5J, or 7J. Available with Intrinsically Safe approvals only. For FM Intrinsically Safe; Nonincendive (option code I5) or FM FISCO Intrinsically Safe (option code IE), install in accordance with Rosemount drawing 03151-1009. Suitable for use with all IS approvals (I1, I2, I3, I5, I6, I7, IA, IB, IE, IF, IG, IP, IM, KG).
41. NACE compliant wetted materials are identified by Footnote 5.

Rosemount 3051S In-line Pressure Transmitter

Rosemount 3051S In-line Pressure Transmitter

Rosemount 3051S In-line Pressure Transmitters are the industry leader for Gage and Absolute pressure measurement. The in-line, compact design allows the transmitter to be connected directly to a process for quick, easy and cost effective installation. Capabilities include:

- Ultra and Classic Performance
- 4-20 mA HART, Wireless, FOUNDATION Fieldbus protocols
- Safety Certification (Option code QT)
- Advanced Diagnostics (Option code DA2)
- Remote Display and Interface (Option code M7, M8, or M9)

1. For detailed specifications see "Specifications" on page 100.
2. Materials of Construction comply with metallurgical requirements highlighted within NACE MR0175/ISO 15156 for sour oil field production environments. Environmental limits apply to certain materials. Consult latest standard for details. Selected materials also conform to NACE MR0103 for sour refining environments. Order with Q15 or Q25 to receive a NACE certificate.
3. Isolator diaphragm selection will dictate materials of construction for wetted parts.
4. "Assemble to" items are specified separately and require a completed model number.
5. Consult an Emerson Process Management representative for performance specifications.
6. Requires PlantWeb housing.
7. Only intrinsically safe approval codes apply.
8. Only available with output code X.
9. Only available with output code A. Available approvals are FM Intrinsically Safe; Nonincendive (option code I5), CSA Intrinsically Safe (option code I6), ATEX Intrinsic Safety (option code I1), or IECEx Intrinsic Safety (option code I7). Contact an Emerson Process Management representative for additional information.
10. Long-Life Power Module must be shipped separately, order Power Module 701PBKKF.
11. Option HR7 configures the HART output to HART Revision 7. This option requires the selection of the Advanced Diagnostics (DA2) option. The device with this option can be field configured to HART Revision 5 or 7 if desired.
12. Requires PlantWeb housing and output code A. Includes Hardware Adjustments as standard.
13. Not available with output code F.
14. Not available with output code X.
15. Not available with housing style codes 00, 01, 2E, 2F, 2G, 2M, 5A, 5J, or 7J.
16. Requires PlantWeb housing and Hardware Adjustments option code D1. Limited availability depending on transmitter type and range. Contact an Emerson Process Management representative for additional information.
17. This assembly is included with options EP, KP, E1, N1, K1, ND, E4, E7, N7, K7, E2, E3, KA, KC, KD, IA, IB, IE, IF, IG, KG, T1, K2, N3, EM, and KM.
18. Transmitter is shipped with 316 SST conduit plug (uninstalled) in place of standard carbon steel conduit plug.
19. Valid when SuperModule Platform and housing have equivalent approvals.
20. Not available with M20 or G $^1/_2$ conduit entry size.
21. Silicone fill fluid is standard.
22. Not available with Housing code 7J.
23. Not available with output code F, option code DA2, or option code QT.
24. See the Rosemount 3051S Reference Manual for cable requirements. Contact an Emerson Process Management representative for additional information.
25. Not available with process connection option code A11.
26. Not available with output code F or X. Not available with housing code 7J.
27. Not available with Housing code 00, 5A, 5J, or 7J.
28. The T1 option is not needed with FISCO Product Certifications; transient protection is included in the FISCO product certification codes IA, IB, IE, IF, IG, and KG.
29. Requires 316L SST diaphragm material and Process Connection code E11 or G11.

30. Not available with Housing code 00, 5A, 5J, or 7J. Available with Intrinsically Safe approvals only. For FM Intrinsically Safe; Nonincendive (option code I5) or FM FISCO Intrinsically Safe (option code IE), install in accordance with Rosemount drawing 03151-1009. Suitable for use with all IS approvals (I1, I2, I3, I5, I6, I7, IA, IB, IE, IF, IG, IP, IM, KG).

Rosemount 3051S MultiVariable Transmitter

Rosemount 3051S MultiVariable Transmitter

The Rosemount 3051S MultiVariable Transmitter delivers unprecedented performance and capabilities by providing superior flow calculations including fully compensated mass or volume, energy, and totalized flow. Specify the level of compensation that best matches the application:

- Gas, natural gas, and steam measurement: Utilize full compensation (differential pressure, line pressure, and temperature measurement)
- Saturated steam: Utilize differential and line pressure, or differential pressure and temperature measurement
- Liquids: Utilize differential pressure and temperature measurement
- Liquids at stable temperatures: Utilize differential pressure measurement
- 4-20 mA HART, *Wireless*HART, FOUNDATION Fieldbus protocols

1. For detailed specifications see "Specifications" on page 100.
2. For Measurement Types 1 and 2, only available with DP range codes 2, 3, and 4, 316L SST and Alloy C-276 isolating diaphragm and silicone fill fluid. For Measurements Types 3 and 4, only available with DP range codes 2 and 3, 316L SST and Alloy C-276 isolating diaphragm and silicone fill fluid.
3. Only available with Transmitter output code A.
4. If ordering measurement type code M, DP Range 4 and 5 are not available.
5. DP Range 0 is only available with Measurement Type 3 or 4 and traditional flange, 316L SST diaphragm material, and Bolting option L4.
6. Required for Measurement Type codes 3 and 4.
7. For Measurement Type codes 1 and 2 with DP range 1, absolute limits are 0.5 to 2000 psi (0,03 to 137,9 bar) and gage limits are -14.2 to 2000 psig (-0,98 to 137,9 bar).
8. Required for Measurement Type codes 2 and 4.
9. Required for Measurement Type codes 1 and 3. RTD Sensor must be ordered separately.
10. Materials of Construction comply with metallurgical requirements highlighted within NACE MR0175/ISO 15156 for sour oil field production environments Environmental limits apply to certain materials. Consult latest standard for details. Selected materials also conform to NACE MR0103 for sour refining environments. Order with Q15 or Q25 to receive a NACE certificate.
11. Tantalum diaphragm material is only available for DP ranges 2-5.
12. "Assemble to" items are specified separately and require a completed model number.
13. Consult an Emerson Process Management representative for performance specifications.
14. Only available with Measurement Type 2 and multivariable type P.
15. Transmitter output code F is not available with Performance Class 1 and 2 and Measurement Type 3 and 4.
16. Only available with output code X.
17. Long-Life Power Module must be shipped separately, order Power Module 701PBKKF.
18. For process connection option code A11, the mounting bracket must be ordered as part of the manifold model number.
19. Not available with transmitter output code F.
20. Not available with transmitter output code X.

21. Not available with process connection option code A11.
22. This assembly is included with certification options EP, KP, E1, N1, K1, ND, E4, E7, N7, K7, E2, E3, KA, KC, KD, EM, KM, IA, IE, IF, IG, KG.
23. Transmitter is shipped with 316 SST conduit plug (uninstalled) in place of standard carbon steel conduit plug.
24. FISCO is only available with transmitter output code F.
25. Not available with M20 or G $^{1}/_{2}$ conduit entry size.
26. RTD cable not available with this option.
27. Requires 316L SST diaphragm material, glass-filled PTFE O-ring (standard), and Process Connection code E12 or F12.
28. Bolts are not considered process wetted. In instances where NACE MR0175/ISO 15156 and NACE MR0103 conformance is required for bolting, L7 is the recommended bolting option.
29. Not available with DP range 0.
30. Only available with Measurement Type codes 3 and 4.
31. When assembled to remote diaphragm seal system using B11 or B12 process connections, the maximum working pressure of the system may be limited by the rating of the Rosemount 1199 Seal System selected.
32. Requires 316L SST or Alloy C-276 diaphragm material, assemble to Rosemount 305 Integral Manifold or DIN-compliant traditional flange process connection, and bolting option L8. Limited to differential pressure ranges 2-5.
33. The T1 option is not needed with FISCO Product Certifications; transient protection is included in the FISCO product certification codes IA, IB, IE, IF, IG, and KG.
34. Available with Intrinsically Safe approvals only. For FM Intrinsically Safe; Nonincendive approval (option code I5), install in accordance with Rosemount drawing 03151-1009.
35. NACE compliant wetted materials are identified by Footnote 10.

Rosemount 3051SF DP Flowmeters

Rosemount 3051SFA

Rosemount 3051SFC

Rosemount 3051SFP

Rosemount 3051SF Flowmeters integrate the Rosemount 3051S with industry leading primary elements. Capabilities include:

- Flowmeters are factory configured to meet your application needs (Configuration Data Sheet required)
- MultiVariable capabilities allow scalable flow compensation (Measurement Types 1–4)
- 4-20 mA HART, Wireless, and FOUNDATION Fieldbus protocols
- Ultra for Flow for improved flow performance across wider flow ranges
- Integral temperature measurement (Option Code T)
- Advanced Diagnostics (Option Code DA2)
- Direct or remote mount configurations available

Additional information

Specifications: page 100
Dimensional drawings: page 147

Rosemount 3051SFA Annubar Flowmeter

- Annubar flowmeters reduce permanent pressure loss by creating less blockage in the pipe
- Ideal for large line size installations when cost, size and weight of the flowmeter are concerns

Specification and selection of product materials, options, or components must be made by the purchaser of the equipment. See page 120 for more information on material selection.

1. For option code A: 4–20mA HART only.
2. See the Rosemount DP Flowmeters and Primary Elements Product Data Sheet for Pipe I.D. table.
3. Provide the "A" dimension for Flanged, Flange-Lok, and Threaded Flo-Tap models. Provide the "B" dimension for Flange Flo-Tap models.
4. Available in remote mount applications only.
5. The cage nipple is constructed of 304SST.
6. Temperature Measurement Option code T or R is required for Measurement Type codes 1, 3, 5, and 7.
7. Required for Measurement Type codes 2, 4, 6, and D.
8. Required for Measurement Type codes 3, 4, 7, and D.
9. For Measurement Type codes 1, 2, 5, and 6 with DP range 1, absolute limits are 0.5 to 2000 psi (0,03 to 137,9 bar) and gage limits are -14.2 to 2000 psig (-0,98 to 137,9 bar).
10. Transmitter output code F is only available with Measurement type code 1, 2, 5, 6, and D.
11. Only intrinsically safe approval codes apply.
12. Only available with Measurement Types D and 6.
13. Only available with output code X.
14. Only available with output code A.
15. For detailed specifications see "Specifications" on page 100.
16. Only available with differential pressure ranges 2 and 3, and silicone fill fluid.
17. Long-life Power Module must be shipped separately, order Power Module 701PBKKF.

18. Option HR7 configures the HART output to HART Revision 7. This option requires the selection of the Advanced Diagnostics (DA2) option. The device with this option can be field configured to HART Revision 5 or 7 if desired.
19. Applies to assembled flowmeter only, mounting not tested.
20. Instrument Connections for Remote Mount Options and Isolation Valves for Flo-tap Models are not included in the Material Traceability Certification.
21. Not available with Transmitter Connection Platform 6.
22. Materials of Construction comply with metallurgical requirements within NACE MR0175/ISO 15156 for sour oil field production environments. Environmental limits apply to certain materials. Consult latest standard for details. Selected materials also conform to NACE MR0103 for sour refining environments.
23. FISCO is only available with Transmitter output code F.
24. Not available with M20 or G $^1/_2$ conduit entry size.
25. Not available with transmitter output code F with Measurement Types 1, 2, 5, or 6.
26. Not available with housing code 7J.
27. Not available with output code X.Only available with Measurement Type D.
28. Not available with output code F, option code DA2, or option code QT.
29. See the Rosemount 3051S Reference Manual for cable requirements. Contact an Emerson Process Management representative for additional information.
30. Not available with Housing code 5A, 5J, or 7J. External ground screw assembly (option code D4) is included with the T1 option. The T1 option is not needed with FISCO Product Certifications.
31. Includes Hardware Adjustments (option code D1) as standard. Not available with output code X or F. Only available with Measurement Type D.
32. -58 °F (50 °C) for Measurement Type 1-7.
33. Not available with output code F.
34. Not available with housing codes 2E, 2F, 2G, 2M, 5A, 5J, or 7J.
35. This assembly is included with options EP, KP, E1, N1, K1, ND, E4, E7, N7, K7, E2, E3, KA, KC, KD, IA, IE, N3, T1, EM, and KM.
36. Not available with Housing code 5A, 5J, or 7J. Available with intrinsically Safe approvals only. For FM intrinsically Safe; Nonincendive (option code I5) or FM FISCO Intrinsically Safe (option code IE), install in accordance with Rosemount drawing 03151-1009.

Rosemount 3051SFC Compact Flowmeter

- Compact conditioning flowmeters reduce straight piping requirements to 2D upstream and 2D downstream from most flow disturbances
- Simple installation of compact flowmeters between any existing raised-face flanges

Specification and selection of product materials, options, or components must be made by the purchaser of the equipment. See page 120 for more information on material selection.

1. For option code A: 4-20mA HART only.
2. Available with primary element technology P only.
3. For the 10-in. (250 mm) and 12-in. (300 mm) line sizes, the alignment ring must be ordered (Installation Accessories).
4. 10-in. (250 mm) and 12-in. (300 mm) line sizes not available with primary element technology code A.
5. For 2-in. (50 mm) line size the beta ratio is 0.6 for primary element technology code C.
6. Required for Measurement Type codes 2, 4, 6, and D.
7. Only available with Measurement Type codes 1, 3, 5, 7.
8. Required for Measurement Type codes 3, 4, 7, and D.
9. For Measurement Type codes 1, 2, 5, and 6 with DP range 1, absolute limits are 0.5 to 2000 psi (0,03 to 137,9 bar) and gage limits are -14.2 to 2000 psig (-0,98 to 137,9 bar).
10. Requires PlantWeb housing.
11. Transmitter output code F is only available with Measurement type code 1, 2, 5, 6, and D.

12. Only intrinsically safe approval codes apply.
13. Only available with Measurement Types D and 6.
14. Only available with output code X.
15. Available with output code A only.
16. For detailed specifications see "Specifications" on page 100.
17. Only available with differential pressure ranges 2 and 3, and silicone fill fluid.
18. Long-life Power Module must be shipped separately, order Power Module 701PBKKF.
19. Option HR7 configures the HART output to HART Revision 7. This option requires the selection of the Advanced Diagnostics (DA2) option. The device with this option can be field configured to HART Revision 5 or 7 if desired.
20. Available with primary element technology code C only.
21. Available with primary element technology codes C or A only.
22. For Annubar Option A, consult factory for pipe schedules other than Sch. 40.
23. Available with primary element technology C or P only.
24. Not available with Output Protocol code F.
25. Not available with output code X. Only available with Measurement Type D.
26. Materials of Construction comply with metallurgical requirements within NACE MR0175/ISO for sour oil field production environments. Environmental limits apply to certain materials. Consult latest standard for details. Selected materials also conform to NACE MR0103 for sour refining environments.
27. FISCO is only available with Transmitter output code F.
28. Not available with M20 or $G^1/2$ conduit entry size.
29. Not available with transmitter output code F with Measurement Types 1, 2, 5, or 6.
30. Not available with housing code 7J.
31. Not available with output code F, option code DA2, or option code QT.
32. See the Rosemount 3051S Reference Manual for cable requirements. Contact an Emerson Process Management representative for additional information.
33. Not available with Housing code 00, 5A, 5J, or 7J. External ground screw assembly (option code D4) is included with the T1 option. The T1 option is not needed with FISCO Product Certifications.
34. Includes Hardware Adjustments (option code D1) as standard. Not available with output code X or F. Only available with Measurement Type D.
35. -58 °F (50 °C) for Measurement Type 1-7.
36. Not available with housing codes 2E, 2F, 2G, 2M, 5A, 5J, or 7J.
37. This assembly is included with options EP, KP, E1, N1, K1, ND, E4, E7, K7, E3, KA, KC, KD, IA, T1, EM, and KM.
38. Not available with Housing code 5A, 5J, or 7J. Available with Intrinsically Safe approvals only. For FM Intrinsically Safe; Nonincendive (option code I5) or FM FISCO Intrinsically Safe (option code IE), install in accordance with Rosemount drawing 03151-1009.

Rosemount 3051SFP Integral Orifice Flowmeter

- Precision honed pipe section for increased accuracy in small line sizes
- Self-centering plate design prevents alignment errors that magnify measurement inaccuracies in small line sizes

Specification and selection of product materials, options, or components must be made by the purchaser of the equipment. See page 120 for more information on material selection.

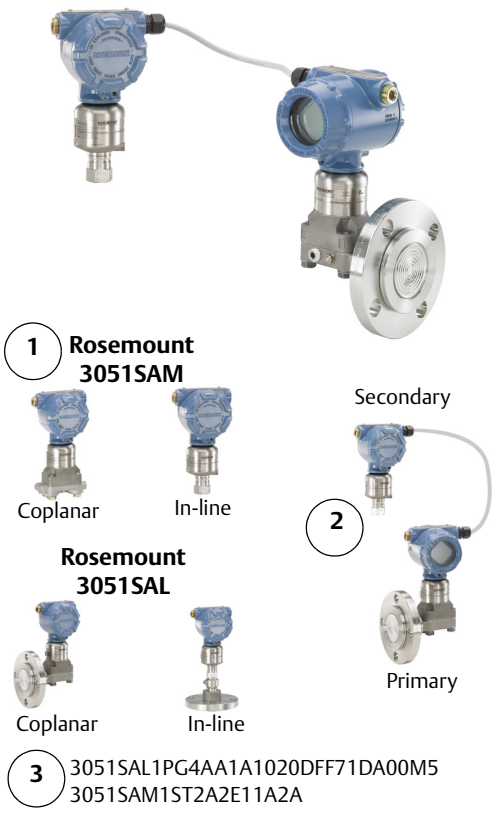
10. For detailed specifications see "Specifications" on page 100.
11. Only available with differential pressure ranges 2 and 3, and silicone fill fluid.
12. Long-life Power Module must be shipped separately, order Power Module 701PBKKF.
13. Option HR7 configures the HART output to HART Revision 7. This option requires the selection of the Advanced Diagnostics (DA2) option. The device with this option can be field configured to HART Revision 5 or 7 if desired.
14. Not available with 1 1/2-in. (38 mm) line size.
15. Thermowell material is the same as the body material.
16. Does not apply to process connection codes T1 and S1.
17. Not available for bore sizes 0010, 0014, 0020, or 0034.
18. Not available with DIN process connection codes D1, D2, or D3.
19. Materials of Construction comply with metallurgical requirements within NACE MR0175/ISO for sour oil field production environments. Environmental limits apply to certain materials. Consult latest standard for details. Selected materials also conform to NACE MR0103 for sour refining environments.
20. Not available with output code X. Only available with measurement type D.
21. Not available with output code F.
22. FISCO is only available with Transmitter output code F.
23. Not available with M20 or G 1/2 conduit entry size.
24. Not available with transmitter output code F with Measurement Types 1, 2, 5, or 6.
25. Not available with housing code 7J.
26. See the Rosemount 3051S Reference Manual for cable requirements. Contact an Emerson Process Management representative for additional information.
27. Not available with output code F, option code DA2, or option code QT.
28. Not available with housing code 5A, 5J, or 7J. The T1 option is not needed with FISCO Product Certifications.
29. Includes hardware adjustments (option code D1) as standard. Not available with output code X or F. Only available with measurement type D.
30. -58 °F (50 °C) for Measurement Type 1-7.
31. Not available with housing codes 2E, 2F, 2G, 2M, 5A, 5J, or 7J.
32. This assembly is included with options EP, KP, E1, N1, K1, ND, E4, E7, K7, E3, KA, KC, KD, IA, T1, EM, and KM.
33. Not available with Housing code 5A, 5J, or 7J. Available with Intrinsically Safe approvals only. For FM Intrinsically Safe; Nonincendive (option code I5) or FM FISCO Intrinsically Safe (option code IE), install in accordance with Rosemount drawing 03151-1009.

Rosemount 3051S Electronic Remote Sensor (ERS) System



The Rosemount 3051S ERS System is a flexible, 2-wire 4-20 mA HART architecture that calculates differential pressure (DP) electronically using two pressure sensors that are linked together with a non-proprietary electrical wire.

Ideal applications for the Rosemount 3051S ERS System include tall vessels and distillation columns that have traditionally required long lengths of capillary or impulse piping. When used in these types of applications, the Rosemount 3051S ERS System can deliver:

- More accurate and repeatable DP measurements
- Faster time response
- Simplified installations
- Reduced maintenance

How to order

1. Choose two Rosemount 3051S ERS Transmitter models. These may be any combination of Rosemount 3051SAM and Rosemount 3051SAL models.
2. Decide which model will be the ERS Primary (4–20 mA loop termination and optional LCD display) and which will be the ERS Secondary. This will be specified by the "Configuration Type" code in each model number.
3. Specify two full model numbers per the desired configuration.

Rosemount 3051SAM Transmitter for ERS Applications

- Coplanar and in-line sensor module platforms
- Variety of process connections including threaded NPT, flanges, manifolds, and Rosemount 1199 Remote Seals
- Available with 15-year stability and 15-year limited warranty

Specification and selection of product materials, options, or components must be made by the purchaser of the equipment. See page 120 for more information on material selection.

1. For detailed specifications see "Specifications" on page 100.
2. The pressure range should be specified based on the maximum static pressure, not differential pressure.

3. Materials of Construction comply with metallurgical requirements highlighted within NACE MR 0175/ISO 15156 for sour oil field production environments. Environmental limits apply to certain materials. Consult latest standard for details. Selected materials also conform to NACE MR 0103 for sour refining environments. Order with Q15 or Q25 to receive a NACE certificate.
4. Not available with Pressure Sensor/Module codes T or E.
5. Tantalum diaphragm material is only available with pressure sensor/module code G.
6. "Assemble to" items are specified separately and require a completed model number.
7. Consult an Emerson Process Management representative for performance specifications.
8. Not available with configuration type code S.
9. Not available with process connection code A11.
10. This assembly is included with options EP, KP, E1, N1, K1, ND, E4, E7, N7, K7, E2, KA, KC, KD, K2, T1, E3, EM, and KM.
11. Not available with M20 or G $^{1}/_{2}$ conduit entry size.
12. Q16 is only available when the diaphragm seal has surface finish options.
13. The QZ report quantifies the performance of the entire ERS system. One report is provided per ERS system. The QZ option is specified on the primary transmitter (configuration type code P).
14. Silicone fill fluid is standard.
15. See the Rosemount 3051S Reference Manual for cable requirements. Contact an Emerson Process Management representative for additional information.
16. NACE compliant wetted materials are identified by Footnote 3.

Rosemount 3051SAL Transmitter for ERS Applications

- Integrated transmitter and direct mount seal in a single model number
- Variety of process connections including flanged, threaded, and hygienic remote seals
- Available with 15-year limited warranty

Specification and selection of product materials, options, or components must be made by the purchaser of the equipment. See page 120 for more information on material selection.

A Rosemount 3051SAL Scalable ERS Level Transmitter consists of three parts. First, specify the transmitter model codes found on page 65. Then, specify a direct mount seal found on page 83. Finish the model number by specifying all desired options on page 68.

1. For detailed specifications see "Specifications" on page 100.
2. At ambient pressure of 14.7 psia (1 bar-a) and ambient temperature of 70 °F (21 °C). Temperature limits are reduced in vacuum service and may be limited by seal selection.
3. For complete process and ambient temperature limits, see "Thermal Range Expander temperature operating range" on page 119.
4. Maximum process temperature is limited by heat transfer to the transmitter electronics and must be further derated if ambient temperature exceeds 70 °F (21 °C).
5. Only available with Thermal Range Expander.
6. This is a food grade fill fluid.
7. Not suitable for vacuum applications.
8. The pressure range should be specified based on the maximum static pressure, not differential pressure.
9. Not available with Configuration Type code S.
10. This assembly is included with options EP, KP, E1, N1, K1, ND, E4, E7, N7, K7, E2, KA, KC, KD, K2, T1, E3, EM, KM.
11. Not available with M20 or $G^1/2$ conduit entry size.
12. Silicone fill fluid is standard.
13. Bolts are not considered process wetted. In instances where NACE MR0175/ISO 15156 and NACE MR0103 conformance is required for bolting, L7 is the recommended bolting option.
14. See the Rosemount 3051S Reference Manual for cable requirements. Contact an Emerson Process Management representative for additional information.

Rosemount 3051S Scalable Level Transmitter

Rosemount 3051SAL In-line with “FF” Flanged Seal

Rosemount 3051SAL Coplanar with “SS” Hygienic Tank Spud Seal

Rosemount 3051SAL Tuned-System Assembly with Thermal Range Expander

Rosemount 3051SAL Balanced System

Rosemount 3051S Scalable Level Transmitters combine the features and benefits of a high-performance Rosemount 3051S with the durability and reliability of diaphragm seals all in a single model number.

Product features and capabilities include:

- Variety of process connections including flanged, threaded, and hygienic seals
- Quantified performance for the entire transmitter/seal assembly (QZ option)
- HART, FOUNDATION Fieldbus, and wireless protocols

Rosemount 3051SAL Scalable Level Transmitter

Specification and selection of product materials, options, or components must be made by the purchaser of the equipment. See page 120 for more information on material selection.

A Rosemount 3051SAL consists of three parts. First, specify the transmitter model codes found on page 72.
Then, specify a direct mount seal found on page 83. Finish the model number by specifying all desired options on page 78.

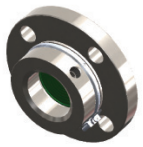
1. For detailed specifications see "Specifications" on page 100.
2. Requires PlantWeb housing.
3. Only intrinsically safe approval codes apply.
4. Only available with output code X.
5. Available with output code A only. Available approvals are FM Intrinsically Safe; Nonincendive (option code I5), CSA Intrinsically Safe (option code I6), ATEX Intrinsic Safety (option code I1), or IECEx Intrinsic Safety (option code I7). Contact an Emerson Process Management representative for additional information.
6. Low side seal identical to high side seal.
7. Maximum working pressure (MWP) of the Thermal Range Expander is 1500 psi (103,4 bar).
8. Requires separate Rosemount 1199 model number to be selected. With option code 1, user must select Seal Location Option code M (low side of transmitter) in the Rosemount 1199 Remote Mount Seal System Model.
9. Capillary Length applies to both high and low side for Balanced Systems. Applies to Low Side Only For Tuned-System Assemblies. Applies to High Side Only for Remote Mount Single Seal Systems with Capillary.
10. At ambient pressure of 14.7 psia (1 bar-a) and ambient temperature of 70 °F (21 °C). Temperature limits are reduced in vacuum service and may be limited by seal selection.
11. For complete process and ambient temperature limits, see "Thermal Range Expander temperature operating range" on page 119.
12. Maximum process temperature is limited by heat transfer to the transmitter electronics and must be further derated if ambient temperature exceeds 70 °F (21 °C).
13. Only available with Thermal Range Expander.
14. This is a food grade fill fluid.
15. Not suitable for vacuum applications.
16. Long-Life Power Module must be shipped separately, order Power Module 701PBKKF.
17. Not available with output code A.
18. Option HR7 configures the HART output to HART Revision 7. This option requires the selection of the Advanced Diagnostics (DA2) option. The device with this option can be field configured to HART Revision 5 or 7 if desired.
19. Not available with output code X.
20. With option code 10, user must select Seal Location option code M in Table 7 of Rosemount DP Level PDS.
21. Requires PlantWeb housing and Output code A. Includes Hardware Adjustments as standard.
22. Not available with output code F.
23. Not available with housing style codes 2E, 2F, 2G, 2M, 5A, 5J, or 7J.
24. This assembly is included with options EP, KP, E1, N1, K1, ND, E4, E7, N7, K7, E2, E3, KA, KC, KD. IA, IB, IE. IF, IG, K2, T1, EM, and KM.
25. Transmitter is shipped with 316 SST conduit plug (uninstalled) in place of carbon steel conduit plug.
26. Valid when SuperModule Platform and housing have equivalent approvals.
27. Not available with M20 or G ½ conduit entry size.
28. Requires PlantWeb housing and Hardware Adjustments option code D1. Limited availability depending on transmitter type and range. Contact an Emerson Process Management representative for additional information.
29. Silicone fill fluid is standard.
30. Materials of construction comply with metallurgical requirements highlighted within NACE MR0175/ISO 15156 for sour oil field production environments. Environmental limits apply to certain materials. Consult latest standard for details. Selected materials also conform to NACE MR0103 for sour refining environments. Order with Q15 or Q25 to receive a NACE certificate.
31. Not available with housing code 01 or 7J.
32. Not available with output code F, option code DA2, or option code QT.
33. See the Rosemount 3051S Reference Manual for cable requirements. Contact an Emerson Process Management representative for additional information.
34. Not available with output code F or X. Not available with housing code 7J.
35. Not available with Housing code 5A, 5J, or 7J.
36. The T1 option is not needed with FISCO Product Certifications; transient protection is included in the FISCO product certification codes IA, IB, IE, IF, and IG.
37. Not available with Housing code 5A, 5J, or 7J. Available with Intrinsically Safe approvals only. For FM Intrinsically Safe; Nonincendive (option code I5) or FM FISCO Intrinsically Safe (option code IE), install in accordance with Rosemount drawing 03151-1009.

Diaphragm seals for Rosemount 3051SAL



Flush Flanged (FF) Seal

- Most common seal
- Good for use in general applications
- Easy installation on flanged connections ranging from 2-in. (DN 50) to 4-in. (DN 100)

Specification and selection of product materials, options, or components must be made by the purchaser of the equipment. See page 120 for more information on material selection.

Specifications

Performance specifications

For zero-based spans, reference conditions, silicone oil fill, glass-filled PTFE O-rings, SST materials, coplanar flange (3051SMV, 3051S_C) or 1/2–14 NPT (3051S_T) process connections, digital trim values set to equal range points.

Conformance to specification (±3σ [Sigma])

Technology leadership, advanced manufacturing techniques, and statistical process control ensure pressure measurement specification conformance to ±3σ or better.

Reference accuracy

Stated reference accuracy equations include terminal based linearity, hysteresis, and repeatability.

For FOUNDATION Fieldbus and wireless devices, use calibrated range in place of span.

1. Flow performance specifications assume device is configured for full compensation of static pressure, process temperature, density, viscosity, gas expansion, discharge coefficient, and thermal correction variances over the specified process operating range using multivariable type M or flowmeter measurement types 1 through 4.
2. Energy, actual volumetric, and totalized flow not available with transmitter output code F.
3. Differential pressure calibrated at up to 1/10th full scale for optimum flow accuracy/rangeability.
4. Uncalibrated differential producer (0.2 < beta < 0.6 Orifice) installed per ASME MFC 3M or ISO 5167-1. Uncertainties for discharge coefficient, producer bore, tube diameter, and gas expansion factor as defined in ASME MFC 3M or ISO 5167-1. Reference accuracy does not include RTD sensor accuracy.
5. For line sizes less than 2-in. (50mm) or greater than 8-in. (200 mm), see the Rosemount DP Flowmeters and Primary Elements Product Data Sheet (document number 00813-0100-4485).

Uncompensated flow performance

Flow performance specifications assume the device only uses DP readings without pressure and temperature compensation.

Vibration effect

Less than ±0.1% of URL when tested per the requirements of IEC60770-1 field or pipeline with high vibration level (10–60 Hz 0.21 mm displacement peak amplitude/60–2000 Hz 3g).

For Housing Style codes 1J, 1K, 1L, 2J, and 2M:
Less than ±0.1% of URL when tested per the requirements of IEC60770-1 field with general application or pipeline with low vibration level (10–60 Hz 0.15 mm displacement peak amplitude/60–500 Hz 2g).

Power supply effect

Less than ±0.005% of calibrated span per volt change in voltage at the transmitter terminals

Electromagnetic compatibility (EMC)

Meets all industrial environment requirements of EN61326 and NAMUR NE-21[(1)(2)]. Maximum deviation < 1% Span during EMC disturbance[(3)(4)(5)].

1. NAMUR NE-21 is met on Rosemount 3051SMV output type A if no external temperature sensor is attached.
2. NAMUR NE-21 does not apply to wireless output code X or ERS configurations.
3. During surge event device may exceed maximum EMC deviation limit or reset; however, device will self-recover and return to normal operation within specified start-up time.
4. For devices with Junction Box housing or Remote Display (housing styles: 2A-2C, 2E-2G, 2J, 2M) testing performed with shielded cable.
5. Rosemount 3051SMV and 3051SF_1, 3, 5, 7 require shielded cable for the process temperature connection.

Transient protection (option T1)

Tested in accordance with IEEE C62.41.2-2002, Location Category B

- 6 kV crest (0.5 µs - 100 kHz)
- 3 kA crest (8 × 20 microseconds)

DP span considerations for electronic remote sensor applications

It is recommended that the DP rangedown (operating pressure/DP span) for ERS applications not exceed 100:1. Consult with Emerson Process Management sales representative when considering a Rosemount 3051S ERS System for applications beyond 100:1 rangedown.

1. *For option code A: 4-20mA HART only.*

4–20 mA HART

Zero and span adjustment

Zero and span values can be set anywhere within the range. Span must be greater than or equal to the minimum span.

Output

The 2-wire 4–20 mA is user-selectable for linear or square root output. Digital process variable superimposed on 4–20 mA signal is available to any host that conforms to the HART protocol.

Power supply

External power supply required.

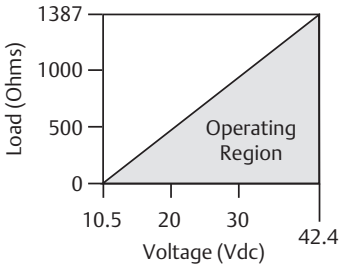
- Rosemount 3051S and 3051SF_D:
  10.5 to 42.4 Vdc with no load
- Rosemount 3051S and 3051SF_D with Advanced HART Diagnostics Suite: 12 to 42.4 Vdc with no load
- Rosemount 3051SMV and 3051SF_1-7:
  12 to 42.4 Vdc with no load
- Rosemount 3051S ERS System:
  16.0 to 42.4 Vdc with no load

Load limitations

Maximum loop resistance is determined by the voltage level of the external power supply, as described by:

Figure 1. Rosemount 3051S and 3051SF_D

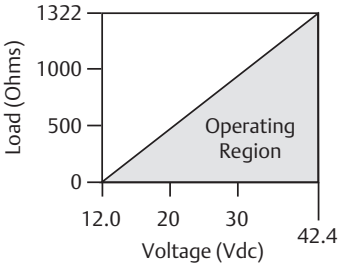
Maximum Loop Resistance = 43.5 × (Power Supply Voltage – 10.5)



The Field Communicator requires a minimum loop resistance of 250 Ω for communication.

Figure 2. Rosemount 3051SMV and 3051SF_1-7, 3051S and 3051SF_D with HART Diagnostics (option code DA2)

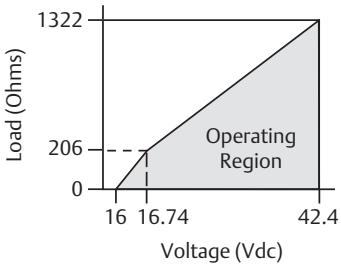
Maximum Loop Resistance = 43.5 × (Power Supply Voltage – 12.0)



The Field Communicator requires a minimum loop resistance of 250 Ω for communication.

Figure 3. Rosemount 3051S ERS System

If supply voltage ≤ 16.74 Vdc:
Maximum Loop Resistance = 277 × (Power Supply Voltage – 16.0)
If supply voltage > 16.74 Vdc:
Maximum Loop Resistance = 43.5 × (Power Supply Voltage – 12.0)



The Field Communicator requires a minimum loop resistance of 250 Ω for communication.

Selectable HART revisions (option code HR7)

The 2-wire 4-20mA is user-selectable for linear or square root output. Digital process variable superimposed on 4-20 mA signal is available to any host that conforms to HART protocol. The Rosemount 3051S with Advanced HART Diagnostics (DA2) comes with Selectable HART revisions. Digital communications based on HART Revision 7 (with option code HR7 selected) or Revision 5 (default) protocol can be selected. The HART revision can be switched in the field using any HART-based configuration. See the Rosemount 3051S Reference Manual for instructions on how to switch HART revision.

Advanced HART diagnostics suite (option code DA2)

Statistical Process Monitoring (SPM) provides statistical data (standard deviation, mean, coefficient of variation) that can be used to detect process and process equipment anomalies, including plugged impulse lines, air entrainment, pump cavitation, furnace flame instability, distillation column flooding and more. This diagnostic allows you to take preventative measures before abnormal process situations result in unscheduled downtime or rework.

Power Advisory diagnostic pro-actively detects and notifies you of degraded electrical loop integrity before it can affect your process operation. Example loop problems that can be detected include water in the terminal compartment, corrosion of terminals, improper grounding, and unstable power supplies.

The Device Dashboard presents the diagnostics in a graphical, task-based interface that provides single click access to critical process/device information and descriptive graphical troubleshooting.

Suite includes: Statistical Process Monitoring (SPM), Power Advisory, Status Log, Variable Log, Advanced Process Alerts, Service Alerts, and Time Stamp capability.

FOUNDATION Fieldbus

Power supply

External power supply required; transmitters operate on 9.0 to 32.0 Vdc (9.0 to 17.5 Vdc for FISCO) transmitter terminal voltage.

Current draw

17.5 mA for all configurations (including LCD display option)

FOUNDATION Fieldbus parameters

Schedule Entries	22 (max.)
Links	25 (max.)
Virtual Communications Relationships (VCR)	20 (max.)

Standard function blocks

Resource block

- Contains hardware, electronics, and diagnostic information.

Transducer block

- Contains actual sensor measurement data including the sensor diagnostics and the ability to trim the pressure sensor or recall factory defaults.

LCD display block

- Configures the local display.

Analog input blocks

- Processes the measurements for input into other function blocks. The output value is in engineering or custom units and contains a status indicating measurement quality.

PID block with auto-tune

- Contains all logic to perform PID control in the field including cascade and feedforward. Auto-tune capability allows for superior tuning for optimized control performance.

Backup Link Active Scheduler (LAS)

The transmitter can function as a Link Active Scheduler if the current link master device fails or is removed from the segment.

Software upgrade in the Field

Software for the Rosemount 3051S with FOUNDATION Fieldbus is easy to upgrade in the field using the FOUNDATION Fieldbus Common Device Software Download procedure.

PlantWeb alerts

Enable the full power of the PlantWeb digital architecture by diagnosing instrumentation issues, communicating advisory, maintenance, and failure details, and recommending a solution.

Advanced control function block suite (option code A01)

Input selector block

- Selects between inputs and generates an output using specific selection strategies such as minimum, maximum, midpoint, average, or first “good.”

Arithmetic block

- Provides pre-defined application-based equations including flow with partial density compensation, electronic remote sensors, hydrostatic tank gauging, ratio control and others.

Signal characterizer block

- Characterizes or approximates any function that defines an input/output relationship by configuring up to twenty X, Y coordinates. The block interpolates an output value for a given input value using the curve defined by the configured coordinates.

Integrator block

- Compares the integrated or accumulated value from one or two variables to pre-trip and trip limits and generates discrete output signals when the limits are reached. This block is useful for calculating total flow, total mass, or volume over time.

Output splitter block

- Splits the output of one PID or other control block so that the PID will control two valves or other actuators.

Control selector block

- Selects one of up to three inputs (highest, middle, or lowest) that are normally connected to the outputs of PID or other control function blocks.

Block	Execution time
Resource	N/A
Transducer	N/A
LCD Display Block	N/A
Analog Input 1	20 milliseconds
PID with Auto-tune	35 milliseconds
Input Selector	20 milliseconds
Arithmetic	20 milliseconds
Signal Characterizer	20 milliseconds
Integrator	20 milliseconds
Output Splitter	20 milliseconds
Control Selector	20 milliseconds

Fully compensated mass flow block (option code H01)[1]

Calculates fully compensated mass flow based on differential pressure with external process pressure and temperature measurements over the Fieldbus segment. Configuration for the mass flow calculation is easily accomplished using the Rosemount Engineering Assistant 5.5.1 software.

FOUNDATION Fieldbus diagnostics suite (option code D01)[1]

Statistical Process Monitoring (SPM) provides statistical data (standard deviation and mean) that can be used to detect process and process equipment anomalies, including plugged impulse lines, air entrainment, pump cavitation, furnace flame instability, distillation column flooding, and more. This diagnostic allows you to take preventative measures before abnormal process situations result in unscheduled downtime or rework.

The Device Dashboard presents the diagnostics in a graphical, task-based interface that provides single click access to critical process/device information and descriptive graphical troubleshooting.

Suite includes: Statistical Process Monitoring (SPM) and Plugged Impulse Line Detection (PIL).

IEC 62591 (*Wireless*HART)

Output

IEC 62591 (*Wireless*HART), 2.4 GHz DSSS

Radio frequency power output from antenna

External antenna (WK option):
Maximum of 10 mW (10 dBm) EIRP

Extended range, external antenna (WM option):
Maximum of 18 mW (12.5 dBm) EIRP

Remote (WJ option) antenna:
Maximum of 17 mW (12.3 dBm) EIRP

High-gain, remote antenna (WN option):
Maximum of 40 mW (16 dBm) EIRP

Local display

The optional seven-digit LCD display can display user-selectable information such as primary variable in engineering units, percent of range, sensor module temperature, and electronics temperature. The display updates based on the wireless update rate.

Update rate

User selectable 1 sec. to 60 min.

Power module

Field replaceable, keyed connection eliminates the risk of incorrect installation, Intrinsically Safe Lithium-thionyl chloride Power Module with polybutadine terephthalate (PBT) enclosure. Ten-year life at one minute update rate.[1][2]

1. Reference conditions are 70 °F (21 °C), and routing data for three additional network devices.
   Note: Continuous exposure to ambient temperature limits of -40 °F or 185 °F (-40 °C or 85 °C) may reduce specified life by less than 20 percent.
2. 6.5-year life at one minute update rates when used with 3051SMV.

5	N/A	3626 psi (250,00 bar)

Maximum working pressure limits

Maximum working pressure is the maximum pressure allowed for normal transmitter operation. For a differential pressure transmitter, the maximum working pressure is the static line pressure under which the transmitter can safely operate. If one side of the transmitter is exposed to the full static line pressure due to mis-valving, the transmitter will experience an output shift and must be re-zeroed. For a gage or absolute pressure transmitter, the maximum working pressure is the same as the Upper Range Limit (URL). The maximum working pressure of transmitters with assemble-to options is limited by the lowest maximum pressure rating of the individual components.

Propylene Glycol and Water	5 to 203 °F (-15 to 95 °C)

1. Process temperatures above 185 °F (85 °C) require derating the ambient limits by a 1.5:1 ratio. For example, for process temperature of 195 °F (91 °C), new ambient temperature limit is equal to 170 °F (77 °C). This can be determined as follows:
   (195 °F - 185 °F) × 1.5 = 15 °F,
   185 °F - 15 °F = 170 °F
2. 212 °F (100 °C) is the upper process temperature limit for DP Range 0.
3. 220 °F (104 °C) limit in vacuum service; 130 °F (54 °C) for pressures below 0.5 psia.
4. -20 °F (-29 °C) is the lower process temperature limit with option code P0.
5. 32 °F (0 °C) is the lower process temperature limit for DP Range 0.
6. For 3051S_C, 160 ° F (71 °C) limit in vacuum service.
   For 3051SMV_ _ 1, 2, 140 ° F (60 °C) limit in vacuum service.
7. Not available for 3051S_CA.
8. Upper temperature limit is 401 °F (205 °C) for no direct mount extension, 464 °F (240 °C) for a 2-in. direct mount extension, and 500 °F (260 °C) for 4-in. direct mount extension.
9. Upper temperature limit is 401 °F (205 °C) for a no direct mount extension.

Turn-on time[1][2]

When power is applied to the transmitter during startup, performance will be within specifications per the time period described below:

Transmitter	Turn-on time (typical)
3051S, 3051SF_D, 3051SAL_ _C	2 seconds
Diagnostics	5 seconds
3051SMV, 3051SF_1-7	5 seconds
3051S ERS System	6 seconds

1. Does not apply to wireless option code X.
2. For option code F, device will communicate on a segment in less than 10 seconds

Volumetric displacement

Less than 0.005 in^3 (0,08 cm^3)

Damping[1]

Analog output response time to a step change is user-selectable from 0 to 60 seconds for one time constant. For Rosemount 3051SMV, 3051SF_1-7, each variable can be individually adjusted. Software damping is in addition to sensor module response time.

1. *Does not apply to wireless option code X.*

Failure mode alarm

4-20 mA HART (output option code A)

If self-diagnostics detect a gross transmitter failure, the analog signal will be driven offscale to alert the user. Rosemount standard (default), NAMUR, and custom alarm levels are available (see Alarm configuration below).

High or low alarm signal is software-selectable or hardware-selectable via the optional switch (option D1).

Alarm configuration

	High alarm	Low alarm
Default	≥ 21.75 mA	≤ 3.75 mA
NAMUR compliant(1)	≥ 22.5 mA	≤ 3.6 mA
Custom levels(2)(3)	20.2 - 23.0 mA	3.4 - 3.8 mA

1. Analog output levels are compliant with NAMUR recommendation NE 43, see option codes C4 or C5.
2. Low alarm must be 0.1 mA less than low saturation and high alarm must be 0.1 mA greater than high saturation.
3. For Rosemount 3051SMV and option code DA2, low alarm custom values are 3.6 - 3.8 mA.

Material selection

Emerson provides a variety of Rosemount products with various product options and configurations including materials of construction that can be expected to perform well in a wide range of applications. The Rosemount product information presented is intended as a guide for the purchaser to make an appropriate selection for the application. It is the purchaser's sole responsibility to make a careful analysis of all process parameters (such as all chemical components, temperature, pressure, flow rate, abrasives, contaminants, etc.), when specifying product materials, options, and components for the particular application. Emerson Process Management is not in a position to evaluate or guarantee the compatibility of the process fluid or other process parameters with the product options, configuration, or materials of construction selected.

Electrical connections

1/2–14 NPT, G1/2, and M20 × 1 1/2 conduit. HART interface connections fixed to terminal block for Output code A and X.

European Directive Information

A copy of the EC Declaration of Conformity can be found at the end of the Quick Start Guide. The most recent revision of the EC Declaration of Conformity can be found at EmersonProcess.com/Rosemount.

Ordinary Location Certification

As standard, the transmitter has been examined and tested to determine that the design meets the basic electrical, mechanical, and fire protection requirements by a nationally recognized test laboratory (NRTL) as accredited by the Federal Occupational Safety and Health Administration (OSHA).

Installing Equipment in North America

The US National Electrical Code® (NEC) and the Canadian Electrical Code (CEC) permit the use of Division marked equipment in Zones and Zone marked equipment in Divisions. The markings must be suitable for the area classification, gas, and temperature class. This information is clearly defined in the respective codes.

Rev 2.0

European Directive Information

A copy of the EC Declaration of Conformity can be found at the end of the Quick Start Guide. The most recent revision of the EC Declaration of Conformity can be found at EmersonProcess.com/Rosemount.

Telecommunication Compliance

All wireless devices require certification to ensure that they adhere to regulations regarding the use of the RF spectrum. Nearly every country requires this type of product certification. Emerson is working with governmental agencies around the world to supply fully compliant products and remove the risk of violating country directives or laws governing wireless device usage.

FCC and IC

This device complies with Part 15 of the FCC Rules. Operation is subject to the following conditions: This device may not cause harmful interference. This device must accept any interference received, including interference that may cause undesired operation. This device must be installed to ensure a minimum antenna separation distance of 20 cm from all persons.

Ordinary Location Certification

As standard, the transmitter has been examined and tested to determine that the design meets the basic electrical, mechanical, and fire protection requirements by a nationally recognized test laboratory (NRTL) as accredited by the Federal Occupational Safety and Health Administration (OSHA).

Installing Equipment in North America

The US National Electrical Code (NEC) and the Canadian Electrical Code (CEC) permit the use of Division marked equipment in Zones and Zone marked equipment in Divisions. The markings must be suitable for the area classification, gas, and temperature class. This information is clearly defined in the respective codes.

Ordinary Location Certification

As standard, the transmitter has been examined and tested to determine that the design meets the basic electrical, mechanical, and fire protection requirements by a nationally recognized test laboratory (NRTL) as accredited by the Federal Occupational Safety and Health Administration (OSHA).

Installing Equipment in North America

The US National Electrical Code (NEC) and the Canadian Electrical Code (CEC) permit the use of Division marked equipment in Zones and Zone marked equipment in Divisions. The markings must be suitable for the area classification, gas, and temperature class. This information is clearly defined in the respective codes.

Accessories

Rosemount Engineering Assistant (EA) software packages

The Rosemount Engineering Assistant software supports flow configuration for the Rosemount 3051SMV and Rosemount 3051S FOUNDATION Fieldbus fully compensated mass flow block (H01 option). The package is available with or without modem and connecting cables. All configurations are packaged separately. For best performance of the EA software, the following computer hardware and software is recommended:

Note
Engineering Assistant version 6.1 or later requires the use of Microsoft®.NET Framework version 2.0 or later. If.NET version 2.0 is not currently installed, the software will be automatically installed during the Engineering Assistant installation. Microsoft.NET version 2.0 requires an additional 200 MB of disk space.

Minimum system requirements for Engineering Assistant 5.5.1 for the Rosemount 3051S and Rosemount 3051SMV FOUNDATION Fieldbus with fully compensated mass flow block

- Intel® Core™ Duo, 2.4 GHz
- Operating System: Windows™ 7, 32- or 64-bit
- 600 MB of available hard disk space
- USB port (for use with fieldbus interface)

Minimum system requirements for Engineering Assistant 6 for the Rosemount 3051SMV HART device

- Pentium®-grade Processor: 500 MHz or faster
- Operating System: Microsoft Windows 2000 (32-bit), Windows XP Professional (32-bit), Windows 7, or Windows 8
- 256 MB RAM
- 100 MB of available hard disk space
- RS232 serial port or USB port (for use with HART modem)
- CD-ROM
